GLOSSARY OF ABBREVIATIONS

APROSAIC	Association of settlers for the economic, social and cultural development of the village of Santa Cruz de la India and nearby communities
CAPS	Potable Water and Sanitation Committee.
MARENA	Ministry of the Environment and Natural Resources
MEM	Ministry of Energy and Mines
SILAIS	Local system of comprehensive health care
NGO	Non-governmental organizations
INIFOM	Nicaraguan Institute for Municipal Development
INATEC	National Technological Institute
ENATREL	National Electricity Transmission Company
UNI	University of Engineering
UNAN León	National University of León
ESIPSA	Professional internal security company S.A.
EIA	Environmental Impact Assessment
INAFOR	National Forestry Institute
DAEM	Explosives and Weapons Directorate
ENACAL	Water and Sanitation Company
COPTRAMIN	Cooperative of Production and Work of Traditional Artisanal Miners of La India Community

Condor Gold has developed an internal prevention protocol with our employees, which includes sanitary measurements within the installations and towards the surrounding communities, such as:

- Talks given and written pamphlets on sanitary measurements and COVID-19 prevention were distributed to employees.
- Avoid social gatherings as much as possible and promote social distancing in common areas.
- Use of masks for employees is obligatory in the installations and villages.
- Cleaning outside and inside of vehicles after each use.
- Alcohol spray (small) is distributed for all employees and for desk/computer cleaning.
- Benzalkonium chloride is distributed for all the employees to use in their houses to clean surfaces.
- Disinfectant booth, washing hands, shoe disinfection and thermometers are used at the entrance of the offices.
- Suppliers are met outside the office areas to reduce contact with employees.
- Guidelines for kitchen area and cleaning procedures have been modified and the use of common items has been eliminated.
- Villagers in the social programs and local schools have received talks, as well as sanitary supplies (alcohol, chlorine, etc).

As of November 2020, Condor Gold regained normal activities, all employees working full time, but with sanitary measurements and social distancing and sanitary measurements being implemented to avoid spreading of Covid-19 and ensure the safety and health of its employees and surrounding communities.

Executive summary

Condor continues to implement its Environmental and Social Management System, which includes Environment, Community, Health and Safety and Human Resources. Activities were restarted in November 2020 with sanitary measurements and social distancing in place.

The environmental work focused on monitoring the level of groundwater and surface water, monitoring climatic parameters, water management, waste management and recycling, maintenance of the plants in "Oro Verde" nursery and maintenance of 5 reforestation areas located in La India and 2 in Real de la Cruz concessions. Daily 5-minute talks were given to workers on environmental, industrial and social safety issues, support was provided to the different areas of the company; Environmental awareness activities were also carried out with workers from the environment and social area and state institutions, support for the León zoo as part of the Biodiversity program.

Other activities included the preparation and delivery of quarterly environmental reports to government institutions, a request to renew the environmental permit for the Tajo America Mining Project was submitted, four inspections of Institutions were attended, meetings were held with the Mayor's Office of Santa Rosa del Peñón on the elaboration of the project profile document and EMP to present to MARENA, the execution of the tree felling plan continued in the plant sector and office areas of the Mina la India mining project, as well as in the Tatiana pit sector, plus environmental supervision during the drilling campaign in the La India and Espinito Mendoza concessions were carried out until November 2021.

The company's social area continue to work on maintaining the social license with neighboring communities through various relationship programs and various communication actions with stakeholders.

The company's social investment has focused on the following programs: Contributions and Donations, addressing issues related *inter alia* to education, health, sports, community grievance; during this period, 56 contributions were delivered to individuals and organizations. Agua Fresca program benefits 448 families from Santa Cruz de la India, Agua Fría and 26 property owners. Seniors program has 88 members; APROSAIC, that works with the communities neighboring the project; Agua es Vida program, which has 180 members; Businesses program, with 84 entrepreneurs; Youth en Acción program, which benefits 21 youth; and Happy Childhood, which benefits 36 children.

This quarter we carried out activities that allowed us to maintain good relations with communities, generating trust and ownership with the project, such as: coronavirus prevention campaigns and actions through all programs, starting with ourselves and thus, serving as an example to the community.

This quarter, important support was provided to the land acquisitions team to advance the Company's strategy for the purchase of properties; the Company also conducted annual meetings with all social programs, reminding its members of all the contributions and efforts made during the year.

The company continues to support training and capacity building of its employees, providing financing and scholarships for English courses, and Masters programs .

INTRODUCTION

This report is part of Condor Gold’s commitment to continuous improvement and monitoring of the implementation of its Environmental and Social Management System (ESMS) in the areas of Environment, Social and Community Relations and Human Resources; ensuring transparency with its shareholders and relevant stakeholders.

OBJECTIVE

To inform stakeholders about the implementation of the Environmental and Social Management System in the areas of Environment, Social and Community Relations, and Human Resources during the fourth quarter of 2021.

ENVIRONMENTAL ACTIVITIES

ENVIRONMENTAL MONITORING

Baseline studies

Condor Gold continues conducting groundwater level and surface water flow monitoring, as well as gathering weather data from its digital weather station and three rain gauges (La India, Agua Fría and La Mestiza locations).

Surface waterflow

Weir monitoring continues. Constant water flow is only present in San Lucas V-notch weir (LIWR001).

In October 2021, water level in San Lucas’ weir was 16cm, going up to 17.5 cm in November due to two hurricane events. However, by the end of December, water level decreased to 16.5cm. Intermittent water flow was observed in the remaining weirs, showing constant water flow during November due to ETA and IOTA hurricanes. (Photos 3.1.1.a-e).

Groundwater level monitoring

Weekly monitoring continues; systematic monitoring was between 22 and 19 sites. Two sites had problems with access, LIWL045 and LIWL046 belong to the same landowner. However, 11 new sites were added as part of the geotechnical studies being done in La India project areas for Tailings Storage Facility final designs and the water dam. In total, 30 sites are being monitored since December 2020.

In October, 3 sites showed a decrease in groundwater level of between 0.05 to 0.86 m - each being hand-dug wells, use affects their levels. 13 sites showed an increase in groundwater level between 0.01 m and 2.65 m, the largest being LIDC374. 3 sites did not show any variation, LIDC047, LIDC379 and LIDC323. LIDC291 showed no changes in groundwater level, LIGT250 and LIWL10 continue to be dry.

In November, 4 sites showed a decrease in groundwater level between 0.05 to 1.92 m. All of them being hand-dug wells, which changes area affected by usage. 12 sites showed an increase in groundwater level between 0.03 m and 14.25 m, the largest being LIDC047. Two sites did not show any variation, LIDC291, and LIDC379. LIGT250 and LIWL10 continue to be dry.

In December, 13 sites showed a decrease in groundwater level between 0.03 to 6.23 m. The most variation was found in drilled hole LIDC047 and LIDC374, located in La Mestiza. Only two sites showed an increase in groundwater level between 0.01 m and 0.08 m, both hand-dug wells. Four sites did not show any variation.

Monitoring of the 11 new sites is being done daily, until the water table is stable, then they will be monitored weekly as all the others. Three new ones will be added in 2021.

Weather data

During the quarter, Condor continued registering data from the weather station and three rain gauges located in Agua Fría village, La India village in La India concession and one in Espinito-Mendoza concession.

Based on Condor’s weather station, the following data was registered during this quarter:

Parameter	October	November	December
Rainfall (mm)	227.07	253.54	0.127
Temperature maximum °C	31.88	30.55	30.8
Temperature minimum °C	19.55	19.38	17
Relative humidity maximum (%)	94.9	95.1	92.6
Relative humidity minimum (%)	43.8	44	37.9
Predominant wind direction (°)	ENE	ESE	NE
Average wind speed (m/s)	3.56	3.78	6.13

The rain gauges registered the following precipitation:

	October	November	December
La India (mm)	196.9	339.7	0.0
Agua Fría (mm)	197.61	372.11	0.0
La Mestiza (mm)	143.25	349.25	0.0

In October, a total of 227.07 mm of precipitation were registered by the digital weather station, about 100mm less than in September. However, in November rainfall increased due to two unusual hurricane events, since historical average of rainfall in November in the area is 53 mm.

The annual rainfall registered was 1,462 mm, higher than the annual average of 1,200 mm for the area.

River sediment study

As part of the environmental baseline studies, and Condor's commitment to implementing international standards, a river sediment study took place in October this year. The study included sampling in 6 sites, selected to cover streams located within its main project areas: La India, America and Tatiana. Samples were taken by lab technicians from the Biotechnology lab of the National Autonomous University of Nicaragua.

The most relevant results showed the presence of high concentrations of arsenic, cadmium, and lead in all sites. Cyanide was not detected, even though it is used in artisanal cyanide ponds.

Sediment sampling downstream of OP, Aguas Calientes stream; b. lab technicians preparing the sample

Acid Rock Drainage kinetic study

As part of the environmental baseline studies, and Condor's commitment to implementing international standards, a more detailed study was implemented with a geochemistry expert. The study is an on-site experiment to determine the potential for ARD and metals leaching from the waste rock that will be generated during the lifetime of the mine, by exposing samples of waste rock from cores to normal climatic conditions (rain) considering different types of rocks from the main projects. Leachates are then collected and analysed.

The official results of this study will be presented by the expert in January 2022. However, preliminary results suggest that the geochemical composition of the natural leachates monitored do not have the potential for the formation of acid rock drainage or metal leaching.

Kinetic field test (left) and core samples in one of the reactors (right)

La India Concession

Surface waterflow

Monitoring daily recording of surface water levels in 5 sites: 1) San Lucas Tunnel, 2) La India Culvert, 3) José León Culvert, 4) La India Landfill and 5) La Simona Landfill; In the case of the first 4, photographic records are kept of Limnometers (graduated rulers) located in such sites, in the case of La Simona, the record is made with pressure sensors. LIGSA has a record of instantaneous flows on a daily basis to La Simona landfill (when there is rainfall) and permanent flow for the San Lucas tunnel landfill, for this quarter in San Lucas site the flow range was established between 23 - 25 lps, with a maximum of 25.66 and a minimum of 23 lps, while that in La Simona there were instantaneous flows between 1 – 17 lps, with a maximum of 213 lps in October. The information is found in photographic record database and digital record of levels and flows generated in the aforementioned sites.

Within the framework of the SWWB (Site Wide Water Balance) project, LIGSA through its international consultants (SRK) and local technical team has achieved the final draft level design of components that will make up this system.

Groundwater level monitoring

Weekly monitoring of groundwater levels in 39 wells / piezometers distributed within the concession; of these sites, 3 belong to the network of local wells located on private properties. The variation of static water levels in the current network fluctuates according to its location with respect to the geomorphology and depth of the wells whose range is between 1.2 to 302 m, and whose water levels for this quarter are located in the range of 0.75 to 132 m, with average values of 29 m for the wells with intermediate depths (10 – 40 m).

Hydrogeological studies

Within the framework of the drainage project from the old mine (Dewatering), 3 exploratory drillings of small diameter (4 ") and depths between 74 - 195 m were carried out, giving rise to LIWB561, LIWB580 and LIWB584 piezometers, achieving the connection to the old mine through the LIWB584 shaft at a depth of 132 m.

5 water injection tests (Slug) were carried out in the exploration of hydrogeological wells to verify the connection, by means of water level reaction in reference piezometers, the volumes injected by wells were established between 14 to 82 m³ in a given time. average 3 – 4 hours; LIGSA has the digital record of the behavior of reaction levels before the test and direct injection.

Weather

Download and processing of climatic data from the Condor Main Meteorological Station (digital), with the generation of 40 types of climatic data, including the main variables: temperature, wind, precipitation, relative humidity, pressure, solar radiation; which are measured with a frequency of one minute, which leads to a record of 57,600 data points per day, for estimation of daily and monthly average data.

Processing and recording of daily precipitation data for 4 conventional pluviometric stations located within the concession, there is a daily and monthly record of the same, for a total of 30 data points per month equivalent to 92 daily precipitation data points per station for this quarter.

Water quality

As part of compliance with the environmental permit and international standards for the feasibility study, LIGSA, within the framework of the ARD project (Acid Rock Drainage / Drainaje Acido de Roca), generated and collected 24 monthly samples for a total of 72 samples for the quarter. These go through a sampling protocol according to the current quality standard, physical parameters are measured, packed and sent to the SGS laboratory in Canada. It has been established that no local laboratory has the ability to analyse with detection limits for metals aligned with international standards for compliance with feasibility in mining projects.

According to preliminary results, the generation of acid from the experiments does not occur, as determined by the analyses which shows that all the parameters are below those established by the current environmental decree in Nicaragua and the international detection limits, with the exception of dissolved solids, which is typical of similar sites. Where tailings (sediment deposit) and the arsenic that is typical (natural in the area) accumulate, the results, conclusions and final dispositions will be evaluated in the feasibility studies by the international consultants (SRK) and the local technical team in the second quarter of 2022).

LIGSA continues to generate fortnightly samples under the irrigation method so at the end of the quarter there are 10 samples including a duplicate, preserved under refrigeration. This is a precautionary measure at the request of the laboratory.

In the second week of November, the second systematic sampling of water quality was carried out in 13 sites within the concession, plus two duplicates, it was carried out with the CIRA UNAN technical team and with the support of the MARENA government institutions, MEM (did not attend) and local governments (Municipalities of Santa Rosa del Peñón and El Jicaral). The results of the analyzes will be delivered in the second week of January 2022 and will be reported in the first quarter of 2022.

Espinito Mendoza concession.

Underground water

Weekly monitoring of groundwater levels in 2 wells / piezometers (LIDC 374 and LIDC379) distributed within the concession shows that the variation of static water levels in the current network fluctuates according to their location with respect to the geomorphology and depth of the wells, which ranges between 125 to 173 m. Water levels for this quarter are in the range of 50 to 70 m.

Within the framework of expanding the underground water monitoring network in this concession, 10 geotechnical wells have been evaluated for their fitting out as piezometers for the measurement of water levels; of these, to date 4 new sites have been validated to be fitted out in the first quarter of 2022.

Water quality

Samples of waste rock from Espinito Medoza are included in the ARD testwork described above.

Cacao concession.

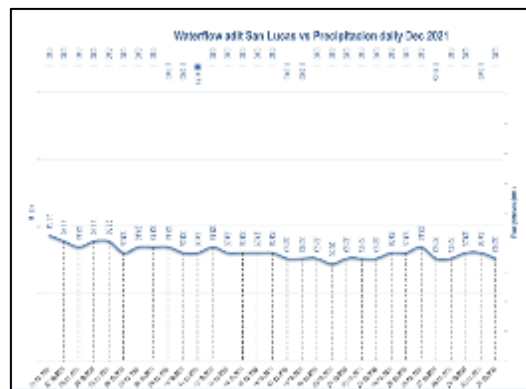

Water quality

At the request of CAPS Cacao, LIGSA included for this occasion the sampling and analysis of water quality in the second systematic sampling of the baseline, as a support to the community. The results of the analysis will be delivered in January 2022 by the CIRA UNAN laboratory.

ENVIRONMENTAL MANAGEMENT

Condor continues to implement its Environmental and Social Management System, in compliance with internal policies and international standards. Condor was working normally this quarter.

The environmental work was focused on monitoring the level of groundwater and surface water, monitoring climatic parameters, water management, waste management and recycling, maintenance of the plants in the "Oro Verde" nursery and maintenance of 5 reforestation areas located in India and 2 in Real de la Cruz concessions. Daily 5-minute talks were given to workers on environmental, industrial and social safety issues, support was provided to the different areas of the company; Environmental awareness activities were also carried out with workers from the environment and social area and state institutions, including support for the León zoo as part of the Biodiversity program.

Other activities included the preparation and delivery of quarterly environmental reports to government institutions. An application for the renewal of the environmental permit of the Tajo América Mining Project was submitted, MARENA issuing an Administrative Resolution of renewal in November 2021. Four inspections of government Institutions were attended, one monitoring of the concessions by MEM and another one by MARENA León to monitor the reforestation carried out in compliance with environmental permits, a third Inspection carried out by Inter-institutional Commission (MEM, MARENA, Mayors) as part of the procedure for permit renewal request for America pit before MARENA, and a fourth inspection by INAFOR with the aim of following up on tree cutting permits issued for Mina La India Project and Tatiana pit. Meetings were held with Santa Rosa del Peñón Mayor's Office relating to the preparation of the project profile document and EIS to be presented to MARENA; the execution of tree cutting plan continued in La India mining project's plant sector and office areas, as well as Tatiana pit sector, and environmental supervisions were carried out during the drilling campaign in the La India and Espinito Mendoza concessions until November 2021.

The "Oro Verde" nursery has a total of 7,731 plants, which are watered, fertilized and kept free of weeds and pests as part of plant maintenance. Activities in the reforestation areas included cleaning, fertilization, irrigation and pest control. A total of 407 trees were used for planting in the reforestation area of the La India Concession, 150 plants were also replaced.

Environmental Management System implementation

Environmental awareness

This quarter in environmental awareness, 5-minute talks were held on safety, environment and social issues. Training was carried out for environmental personnel with the support of the Agrologico company on the subject of care, maintenance, reproduction and protection of plants, good use of products for their propagation? and all kinds of technical information to improve the knowledge of the workers who carry out reforestation and nursery maintenance activities, guaranteeing a higher percentage of survival of the plants. An activity was carried out in El Tanque Community in coordination with the social area related to the reduction of non-hazardous solid waste, concluding the activity with a cleaning day in the well of El Tanque Community. Materials relating to the care and protection of the environment were distributed among Mina La India project's workers as a dissemination strategy.

Other activities related to environmental awareness were donations to the León Zoo that included food for the bird species.

T-shirts and snacks were also delivered to INAFOR and MARENA in support of activities on the national reforestation plan and environmental awareness issues led by MARENA in the communities near the project

Participatory Water Monitoring Program

On 4th December the water sampling in the Tatiana and America projects area took place; however, road access was difficult due to weather conditions. Consequently, two places were not reached to take the water samples.

On 10th December the water sampling for the Participatory Water Monitoring Program of La India project took place. Nine sites were sampled, and a duplicate was taken as part of the quality control. Results will be received in January 2022. Only MARENA-León and Alcaldía El Jicaral participated as institutions, MEM was unable to attend as well as Alcaldía Santa Rosa del Peñón. Local representatives waited at their village wells to supervise the sampling but did not accompany the team to all sites due to Covid19 restrictions.

Ocotillo upstream (left), Nance Dulce public well (right) sampling for La India project

Also in December, socially distanced meetings in the seven villages were organized so as to inform local residents of the results of July 2021 water sampling conducted as part of the Participatory Water Monitoring Program. A total of 131 people participated. The meetings were held in El Carrizal, La India, Agua Fría, El Bordo, Nance Dulce, El Cristalito and Ocotillo villages. Participation was conducted with limited participants; and interaction was reduced to a minimum.

During the above, the new hydrologist was introduced and participated as part of the environmental team.

(a)

(c)

(b)

(a) El Bordo village, (b) El Carrizal village and (c) Cristalito village.

Waste management program implementation

During this quarter, activities related to waste management continued at the La India concession and at the company's facilities

During this quarter, 1,930 pounds of waste were collected overall; of which 1,320 lb of organic waste was generated, sent to the municipal dump and glass, paper-cardboard and plastic were stored for recycling with a total of 610 lb, which will be delivered to sites authorized by MARENA. Hazardous solid waste has also been generated (barrels of oil, barrels of hydrocarbons, oily rags, among others), for which removal is being managed with companies authorized by MARENA.

During the daily 5-minute talks, in the fourth quarter, an information plan was drawn up on issues related to Environmental Management in order to raise awareness among all Company workers and prepare them for the next stage to which they are about to enter: the Mina La India project, where environmental management must be stricter.

Soil protection and biodiversity conservation

As part of the biodiversity remediation and conservation efforts, Condor continues with its tree nursery in the La India concession. Likewise, Cónдор continues to implement reforestation plans in 7.13 *ha* located in the villages of Nance Dulce, Soledad de la Cruz and Los Rastrojos in agreement with property owners and Alpha 6 - owned by the company. During this quarter, the reforestation plan included maintenance activities such as irrigation and fertilization, weed removal and replacement of trees.

Condor continues with its monthly donations to the Arlen Siu Zoo in León, implemented since the fourth quarter of 2019, as part of Condor's commitment to the protection of biodiversity.

In addition, as part of the soil protection program, site inspections were carried out in the areas of the drilling campaign in la India and Espinito Mendoza concessions, geotechnical drilling, viewpoints and road access areas (the latter as part of the maintenance of such areas). These

inspections are carried out before, during and at the end of activities to ensure environmental measures were implemented and negative impacts prevented or minimized. The areas are then remediated and rehabilitated to ensure soil conservation, reduce potential erosion process and river sedimentation and to encourage revegetation.

Tree nursery “Oro Verde”

The “Oro Verde” nursery provides trees for all the reforestation areas in Condor concessions. At the end of this quarter, a total of 7,731 plants were watered, fertilized, cleaned of weeds and pests as part of the nursery maintenance program.

There was an increase in the inventory of plants because this quarter we have germinated seeds of species of *oak*, *Madroño*, *basillito* and *melina* achieving the germination of 1181 new plants, which have been monitored. Additionally, this quarter we have managed to reduce pests that affect plants by buying and applying insecticides.

Maintenance of oro verde nursery

Implementation of reforestation plans and other activities in the concessions

Activities in the reforestation areas included cleaning, fertilization, irrigation, pest control. A total of 407 trees were used for planting within La India and Real de la Cruz concessions reforestation area.

As part of the reforestation commitment of 200,000 plants which La India Gold SA committed to in the EIA for Mina la India, and according to the agreement reached before this Institution, 257 plants have been donated to Institutions such as INAFOR and Mayor's Office, which are taken into account in the fulfillment of this commitment.

La India concession

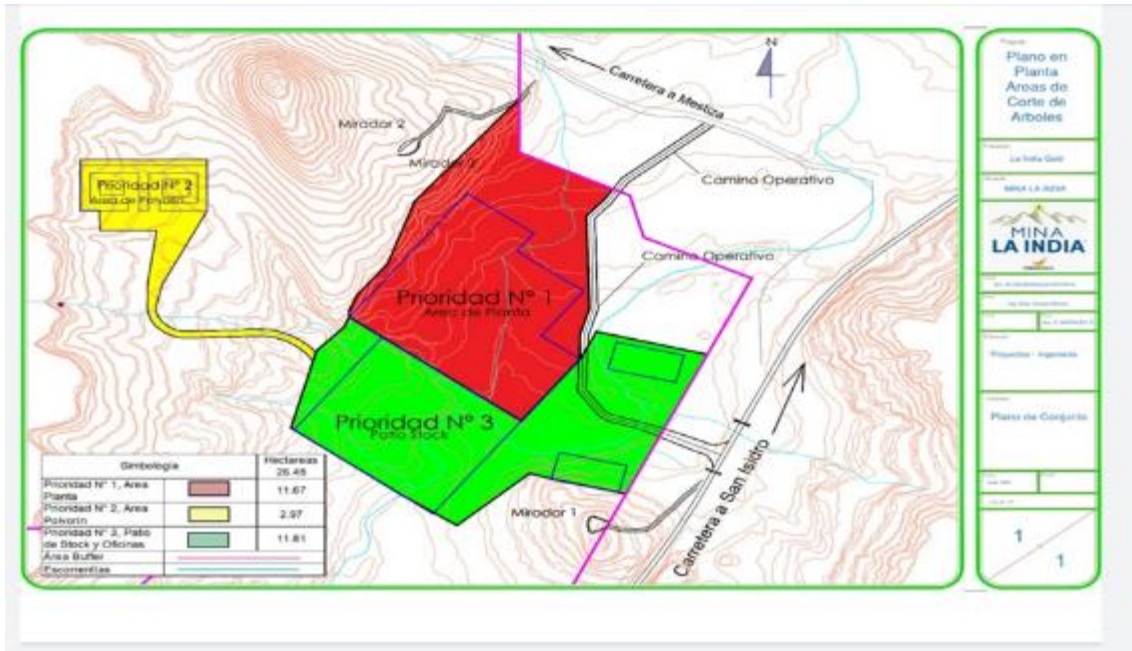

Reforestation activities

Maintenance of reforestation areas in Nance Dulce, Los Rastrojos and within the company's property (ALPHA 6) continues. This activity is necessary to ensure the survival of planted trees and part of La India company's environmental commitments.

Maintenance of reforestation areas in Nance Dulce

Activities in the reforestation areas included cleaning, fertilization, irrigation and pest control. A total of 68 trees were planted in the Nance Dulce reforestation area.

Tree cutting activities held in the Plant sector and office area was completed in October 2021, and continued in the Tatiana pit area until December 2021, focusing on the pit perimeter and dumps.

Photographic summary: cutting activities > Processing plant and office

Photographic summary: cutting activities / Tatiana Pit

Among the cutting activities, cleaning of weeds and removal of woody material were carried out, poles were made with cut trees, which are being used for fencing activities in areas owned by the company, as approved in the cutting permit granted by INAFOR. Firewood was not delivered this quarter at the request by INAFOR. This is intended to resume in January 2022.

Inspection Visit by the Institutions

Visit by MARENA León. A visit was received from environmental technician of this Institution as part of the follow-up to company's reforestation areas, in compliance with environmental permits, congratulating Mina La India for being a company that allocates adequate resources for the planting and maintenance of new trees as a contribution to the environment, thus complying with permit commitments.

2. Inspection visit by MARENA Central

In October 2021, an environmental permit renewal for the America Pit Exploitation permit project was requested before the General Directorate of Environmental Quality, in accordance with the procedures established by this Institution. An inspection was carried out to evaluate the project sites and the renewal of the permit was subsequently issued in November 2021.

2. Inspection by INAFOR

Following up on the tree cutting permits issued for La India and Tatiana Mining Exploitation projects, INAFOR-León made a visit to each areas, finding that what was proposed to and approved by La India Gold SA and Condor S.A had been accomplished.

2. Inspection by MEM

In compliance with the provisions of Law 317, Mining Law, the General Directorate of Mines / MEM, carried out an inspection to learn about all the activities carried out in the La India and Espinito Mendoza concessions. The Inspection report concluded that the company CONDOR GOLD is one of the companies with the best technical-environmental compliance nationwide, as well as the best development of social programs for the communities in its Concessions, indicating that we have a good professional staff.

Activities in Real de la Cruz concession

Reforestation activities

The maintenance of the reforested area in Soledad de la Cruz continued. This included irrigation, weeding, fertilization and pest control of trees. A total of 150 trees were replaced in this area.

Other activities

Support activities were carried out to all areas of the company: Preparation of carved wooden Christmas decorations , preparation of presents for Institutions, support on electrical system maintenance of the warehouse in Alpha 6 , support in masonry works in Alpha 6 and camp kitchen, cleaning and burning of weeds in viewpoints, and support to geology and projects for studies that were being carried out in La India's tailings dam.

Images of different activities in which support was provided to all areas of the Company

SOCIAL ACTIVITIES

STAKEHOLDER ENGAGEMENT IMPLEMENTATION

Meetings with local stakeholders

During this quarter, the company held more than 70 meetings with the leaders of the social programs to coordinate the activities carried out with the members of the programs and the community in general.

Main topics addressed were:

- Water program
- Senior program
- Social contributions
- Business program
- APROSAIC
- Artisanal mining
- Youth in action
- Happy childhood

Bilateral meetings with local stakeholders

Bilateral meetings

During this period, the company held 70 bilateral meetings, with local organizations in the Area of Direct Influence (ADI) and with NGOs and/or institutions interested in collaborating with social programs.

In December, 60 visits were made to actors of national, departmental, municipal and local interest. The visits were made at the end of the year, an update was shared on how the Project is progressing and they were given a message wishing them a Merry Christmas.

During October and November, 10 visits were made to various stakeholders to follow up on social efforts.

Communication campaign

During this quarter, the company continued to carry out communications about Covid prevention, the acquisition of 81% of SAG mill's pieces and delivery of potable water that the company provides to Santa Cruz de la India and Agua Fria through the Agua Fresca program.

Community relations implementation plan

La India Gold developed a social investment plan oriented to generate conditions to promote better community relations in the areas of direct and indirect influence to the project; with a

focus on water, communication, support for small mining, among other contributions and programs.

During the quarter, the investment was **US \$ 48,650.71** in the following items:

SOCIAL INVESTMENT					
N°	Area	October	November	December	Total
1	Communication	\$ 4,101.93	\$ 3,686.94	\$ 4,006.19	11,795.06
2	Water	\$ 2,016.00	\$ 1,684.19	\$ 1,739.49	5,439.68
3	Artisanal Mining	\$ 1,573.00	\$ 1,589.59	\$ 1,369.89	4,532.48

Delivery of hair cutting machine.

Delivery of covid prevention kit.

Delivery of cement to applicant.

Delivery of covid prevention kit.

Donation of toys to catholic church.

Delivery of basic products to MINSA personnel.

Delivery of tin sheets to applicant.

Agua fresca program in Santa Cruz de La India

The Agua Fresca Program was created in order to help the families from Santa Cruz de La India and Agua Fría to consume quality water as in these areas there is a great need for adequate quality and quantity of water.

In the fourth quarter of 2021, house-to-house delivery of water continues and Santa Cruz de La India benefits from the delivery of a second canister, which doubles this benefit to the people. The installation of the water purification plant located at Finca “El Delirio”, where the company has operators for filling, packaging and sealing of canisters, their distribution to families has improved.

With the Agua Fresca program, vulnerable sectors of Santa Cruz de la India include: elderly, people with disabilities and multi-household families continue to receive support with access to quality water with the delivery of 8 bottles of purified water on a monthly basis. This contribution mitigates the problem of water scarcity and intestinal diseases, which has been verified by the local health center.

During the pandemic period, the program did not stop its contribution and the weekly delivery was made to provide this vital resource to families. Furthermore, the collaborators in charge of the distribution reinforced biosecurity measures during the delivery.

In the period from October to December in Santa Cruz de La India, 4,492 canisters of purified water were delivered.

Activities within the water program:

- 283 families have the benefit of receiving two canisters of water weekly.
- Santa Cruz de La India inhabitants have the benefit of receiving the second canister of water per week at a central point: Information Office.
- 5 institutions received two canisters weekly. 4 of them for free.
- 283 families received recommendations on cleaning the bottle and dispenser to prevent infections.
- 283 families received recommendations on the care of canister, permanent awareness for its proper use.
- In December, the program gave the beneficiaries of the program a Christmas present, sharing a message of solidarity, good wishes for Christmas and the end of the year, urging them to share as a family.
- Delivery of water to new beneficiaries of the Agua Fresca program.
- Registration of multi-household families in the community of Agua Fría (8 registrations).
- Participation in the annual assembly to share with the boards of directors of the social programs the impacts achieved with the program in the community during the year 2021.

Santa Cruz de la India	82	201	283

Agua Fría

Agua Fría is directly affected by the Project, so Condor Gold, through the Agua Fresca Program, has provided this benefit to families of this community, which also suffers from water scarcity and quality.

The Agua Fresca program delivers house-to-house and benefits 165 families in the community, including free deliveries to vulnerable sectors such as the elderly and people with disabilities.

The program continues to provide benefits to the community with the incorporation of multi-household families. This has increased the number of beneficiary families, providing access to quality water to more families in the community; multihousehold families continue to be enrolled.

In the period of more infections by Covid-19, the program continued delivery, reinforcing biosecurity measures for the protection of employees and families.

From October to December in Agua Fría, 1,783 canisters of purified water were delivered.

Activities within the program:

- 165 families receive their drum weekly
- 165 families received recommendations on the cleanliness that should be given to the bottle and dispenser. This message is permanent for the correct handling of both.
- 1 institution receives the canister weekly for free.
- Water delivery house-to-house.
- Registration of multihousehold families in the community of Agua Fría (11 registrations).
- Inhabitants were reminded about prevention measures against the Coronavirus during the delivery of the bottles.
- Participation in the annual assembly to share with the boards of directors of the social programs and the impacts achieved with the program in the community during the year 2021.

Agua Fría	39	126	164

Water purification plant.

Since the start-up of the water purification plant, the families from Santa Cruz de La India and Agua Fría have access to quality water, purified in one of the company's properties.

The purification process is carried out through rigorous sanitary measures to provide quality water, a process that culminates with the washing, filling and sealing of the water canisters for distribution to beneficiaries. Every time the tank is filled, the water treatment plant operators monitor the water quality.

In this quarter, the treated water tank was cleaned, as well as the pipes to ensure the production of quality water.

In this quarter the production has been as follows (in number of canisters):

October: 2,440

November: 2,338

December: 2,334

Total: 7,112

In this quarter the water treatment plant was visited by the Ministry of Energy and Mines (MEM) and by Dr. Juana Méndez, Supreme Court of Justice Magistrate with a delegation of judges who accompanied her to see the water treatment plant with which quality water is supplied to the population of Santa Cruz de la India and Agua Fría.

Business program

On December 27th, 2021, the business program celebrated its 4th anniversary. This program started with the purpose of supporting the development, progress and growth of local businesses in Santa Cruz de la India.

Currently in Santa Cruz de la India there are 121 businesses such as grocery stores, tortilla shops, diners, bars, clothing stores, etc. Until now, there has never been a program that gave attention to community businesses.

At the end of the quarter, there is a participation of 84 business owners registered in the program who are part of the activities carried out by the board of directors with the support of Condor Gold.

During the fourth quarter, activities were focused on visiting businesses and promoting biosecurity measures to prevent Coronavirus. Activities focused on promoting financial education were also carried out, so that business owners have better management of their finances and year-end activities to publicize the impact of the activities that were carried out during the year.

As part of the program, there are projects that have come to strengthen the economy of the community: Communal Bank, Community Savings Program and Community Room Leasing Project.

Condor Gold, through the business program, continues to generate development opportunities for all and maintain transparent communication with the population.

Project Description	Total, Individuals Benefited			Month

Chloride delivery

Visit to members of the savings program

Visit to local actors to report on the activities of the 3rd quarter

Training of leaders of the boards of directors

Christmas poster delivery to business owners

Youth in action program

During the fourth quarter of 2021, Jóvenes en Acción developed its activities with the objective of strengthening knowledge in youth, providing spaces for coexistence among young people where they learn to relate in a healthy manner, they were given the opportunity to acquire learning through workshops carried out dynamically and with the aim of contributing to the development of leaders.

The Covid-19 prevention campaign has been constant with the youth enrolled in the program and their families. The young people have joined in taking biosecurity measures for their protection and that of their families and community.

We address important issues for the formation of a society such as the leadership and response capacity that the young population must have to carry out actions that contribute to the construction of a healthy environment and with socially and environmentally responsible people.

With the actions carried out from the program, we are giving tools to youth to take initiatives and collaborate in exercising a leading role in their community, taking necessary actions in Mina la India given the lack of youth leadership and social commitment. For that reason we are working with activities that promote the awakening of youth to be agents of change, to be visionary young people with goals for their lives and to contribute with their actions to the needs of their community.

Item	Activity	Participation	village	month
Relationship	Meeting with youth members of the program.	6 youth	Mina la India	October
Personal development	Conversation about covid-19 and vaccines.	15 youth		
Youth as protagonists of change.	Meeting with youth in action and the federation of high school students from the Gonzalo García Vallejos school.	15 people.

Workshop and coexistence celebrating the second anniversary of the opening of the program.

Second conversation with the theme: Youth actions for community service.

End of the year coexistence with youth from Mina la India integrated into the program.

Happy childhood program

In the fourth quarter of 2021, the children from Mina la India enrolled in the program enjoyed recreational afternoons through educational games and experiments, activities in which the children learned about teamwork, listening, observation and the coordination between them; skills that must be put into practice to achieve an objective.

With the initiatives of the program from October to December we promote the value of love for the family, activities that strengthen our good relationship with the families of the boys and girls.

We are cultivating care for the environment in children, we continue to sensitize children and parents about the pollution generated by the population itself, inviting them to classify and put garbage in its proper place to have a clean community.

We celebrate two years of accompanying the children from Mina la India, celebrating in an atmosphere of joy with the children the benefits that this program has given them in terms of healthy recreation, strengthening of values, learning environments and promoting a good relationship family.

Axis	Activity	Participants	Villages	Month
Relationships with family	Relationship visits to children's homes.	36 visits	Mina la India	October

APROSAIC

The program has a board of directors of 4 active members and 25 leaders distributed in the 6 communities where it works: El Cristalito, El Bordo, Nance Dulce, El Carrizal, Los Rastrojos and Andrés Reyes. The focus is on 3 axes: Culture, Education and Community Leadership.

All the actions that are carried out are executed once the company has given its approval, according to the oriented guidelines; coordinated with the board of directors, community leaders and often supported by other social programs or other areas involved in the social development of the communities surrounding the mining district

Previously, analyses of the current situation of each community is carried out, to which the community leaders contribute and if necessary, some strategic alliances are made with mayors, ministries or institutions that can contribute to addressing the needs of the communities; bearing in mind that each community can be a different reality in terms of its needs and population.

Below are the activities with the greatest impact, carried out in the fourth quarter of 2021, according to their axes:

Children's Baseball League.

INDEPENDENT ARTISANAL MINERS INVOLVEMENT GROUP

During this quarter, new artisanal mining permits in the areas of San Juan and La Mestiza were monitored, where 13 groups, totaling 66 people, benefitted. The sites were constantly monitored and supported at the time of any doubt or any request made to the Condor Gold small mining area.

52 inspections were carried out at the mining works to supervise compliance with the agreement. Apart from this, they were given talks on the prevention of COVID, showing a willingness to receive and listen to the messages with the greatest possible attention since the town of Santa Cruz de La India has been hit by COVID since August.

IDENTIFICATION OF VULNERABLE FAMILIES

Santa Cruz de la India's seniors program

The Santa Cruz de la India Senior Adults program was formed 4 years ago. Currently, 120 adults over 60 years of age live in the community, of which 88 are enrolled in the program.

The activities of the fourth quarter were focused mainly on health, coexistence, recreation and self-sustaining projects. A campaign was also maintained to promote biosecurity measures to prevent Covid.

The board of directors, with the support of Condor Gold, fostered the integration of older adults with the community and family, so that they feel part of their family nucleus and society. Activities were also promoted that allowed physical, mental, and spiritual strengthening for adults to lead active and healthy lives.

The members of the board of directors received training on self-management, 27 food packages were delivered to the sick, 2 dance therapy workshops were carried out, and 2 craft activities were also carried out that help the elderly improve their motor skills.

The self-sustaining projects: Medicinal Garden and Piñatas and Santa Cruz de la India varieties, resumed their activities in a normal way with the purpose of continuing to project and sell their products.

TATIANA AND AMERICA PROJECT

In January 2020, the relationship began in the communities of El Tanque, Talpetate, El Capulín and Quebrachal, communities that are indirectly affected by the secondary projects, América and Tatiana, complements to the main project La India.

For this year 2021, the axes that have been worked on are as follows: Community leadership, Education, Health and Environment; and Self-sustaining Projects.

In the quarter, awareness was maintained for the prevention of Covid, for which support was provided with chlorine and chloride to community institutions.

In the area of education and environment, a total of 5 activities were carried out involving the population to carry out cleaning days, a recycling workshop and providing support to the El Quebrachal School where they donated a cupboard to store their books.

In this quarter, the bakery course ended in coordination with the National Technological Institute- INATEC, where 22 women from the El Tanque community obtained their certified diploma for having successfully completed the course.

To close the year, the Community Leadership axis with the purpose of training leaders and empowering them in Community Leadership and management so that in 2022 they continue working hand in hand with the company for the benefit of their communities.

INFORMATION OFFICE

This facility is a space for anyone who wishes to come into contact with the company, whatever the reason. It is attended by a person trained to provide the service and information to the community and other interested parties.

At this facility, weekly meetings are held with the boards of directors of the different social programs, activities are scheduled, it serves as a warehouse for instruments that the programs use frequently, applications and resumes are received and it is a place to attend in a pleasant and cordial way to everyone who visits the company.

On Fridays of each week, it is the designated place where the second canister of water is delivered to the community of la India by the Agua Fresca program.

During the last quarter, a new strategy was implemented: rapid impact workshops for training and educational purposes, with social, environmental and mining issues. Offered to people from la India and its surrounding communities. Some of these workshops have been given in the classrooms of the Colegio Gonzalo García in La India. They are coordinated by the company and according to the theme, the sector and age of the population to be invited is defined.

In October, 149 visits were received, in November 211 and in December 153, all for different reasons. This increase in visits in the penultimate month of the year was due to two factors: effective participation in quick-impact workshops and program meetings for planning year-end activities.

The table below summarizes the detail of the 513 visits, according to their purpose:
